Q1) Introduction:
Hello, my name is Selina Varshney, and I'm currently a final year Computer Engineering student at Thapar Institute. I'm from Noida, where I completed my schooling at Cambridge School Noida and was the school topper. With a passion for the tech industry, I am currently a full-stack developer, but I'm eager to explore booming areas of technology like machine learning and AI, and enthusiastic to learn new skills as well.
I enjoy connecting with new people, and I've had the rewarding experience of mentoring over 150 students as the Joint Secretary of the Linux User Group at my college. In addition to my academic and mentoring pursuits, I'm passionate about western dance and regularly participate in various college and hostel events. I also have strong management and communication skills, which I further developed through debating during my school years.

Q2) Do you have any past experiences?

I recently completed my summer internship at JP Morgan Chase & Co. in Mumbai, where I worked on a real-world trading application. My role involved developing a client FTP reports addition page using React TypeScript for the frontend, Spring Boot for the backend, and Oracle SQL for the database. The previous year, I interned at Tech Mahindra, where I gained experience with Amazon Web Services, particularly Amazon EC2, and learned how to use Jenkins to deploy a Java application. Additionally, I've had the opportunity to organize several successful flagship events and mentor over 150 students as the Joint Secretary of the Linux User Group at my college.

Q3) Why do you want to join Warner Brothers?
I want to join Warner Brothers because I've grown up watching iconic films like Harry Potter and beloved TV shows like Friends, animated cartoons like Looney Tunes. The idea of working for a company that has brought such incredible stories to life is incredibly exciting to me. Warner Brothers is where creativity truly comes to life, and being part of a team that produces content that has such a profound impact on people is something I'm deeply passionate about. I also love innovation and enjoy thinking outside the box, which is why I feel I would be a perfect fit for your organization.

Q4) Recently watched TV Series:
"Suits" centers around Mike Ross, a brilliant individual who helps people cheat on the LSATs but never had the chance to attend law school himself. A twist of fate leads him to meet Harvey Specter, a charismatic attorney who, impressed by Mike's vast knowledge, hires him as an associate despite knowing he's unlicensed. What draws me to the show is its message that if you truly desire something, you'll find a way to achieve it. What I love about the show is how Mike, despite being a newcomer with no formal education, works tirelessly to prove himself. He stands up for his mentor, Harvey Specter, who, in turn, believes in him and helps him grow. The complex emotions, witty dialogues, and the inspiring dynamic between Mike and Harvey make this legal drama stand out, even for someone who wouldn't typically watch such a genre. The witty personas of the characters truly reflect the confidence and sharpness delivered by a suit, making the show incredibly compelling.
